

Lindman

Modern design with reliable materials

The goal was to create a modern, ecologically and private houses for the same cost as a prefab catalog house. This was succeeded by using an effective process management, proven materials and a rational framework.

The house ranks at an angle on the plot to exploit the site's lighting conditions optimally and to create a sheltered patio. Much work has been done to adapt the layout to the family's needs. A basement was built in a second phase in 2006 when the family had grown.
