

ALM Equity

Refined, simplified and changeable

ALM Equity AB works with real estate development. Its new head office is situated on Regeringsgatan in the centre of Stockholm and comprises of about 700 sqm. Some 50 employees have their workplace here. The interior features smart built-in technology in spaces such as meeting rooms, kitchen and open project places. These high end solutions are a key factor of the work ethics that represent ALM – high efficiency, easy access to colleagues and an open, no fuss way of communication. After work activities are encouraged in the large kitchen, being equipped with audio-sound system and bespoke along-the-walls sofa.

The design concept mimics the simplicity of basic building materials in the use of expanded metal sheets and Cembrit as cladding on certain walls. The metal sheets are being used as semitransparent blinds on glass partitions, enhanced by back lighting from LED-strips. Large numbers and symbols, inspired by the distinct signage on containers, direct you to the right meeting room or telephone booth. Rough edges performed with finesse!
